Components Map — ProductHunt Partnership Scout

Mesa Cohort C4 · AI and its Applications · Final Exam, Problem 4
Live: partnership-scout.vercel.app

One click for Kavya → live ProductHunt launches (last 7 days) → scored by upvotes + maker replies → Gemini AI judges fit & drafts outreach angle → ranked outreach list.

INPUT

From Kavya — Next.js UI · Vercel

- Categories (Project Mgmt, HR Tech, Dev Productivity, Team Comms)
- Her product description (async standups)
- List size (5–15)
- Click "Scout this week's launches"

Live external data — ProductHunt API

Every launch in the last 7 days, per topic: name, tagline, description, upvotes, launch date, makers (name + ID), comments & replies

PROCESSING — one Vercel serverless function, ~25 s

1. **Fetch & merge** — ProductHunt API
   Query each topic in parallel, remove duplicates, keep the 20 strongest by upvotes (from ~113 launches).
2. **Measure maker responsiveness** — ProductHunt API
   Count comments + replies written by each product's makers (matched by user ID). No public makers → "–", never a fake 0.
3. **Score & rank** — Plain code · no AI
   `score = 100 × (0.6·log(1+upvotes)/log(1+max) + 0.4·log(1+maker comments)/log(1+max))`
4. **Judge fit & write the angle** — Gemini Flash · only AI
   For each product: one-liner, 2-sentence outreach angle, fit (high / medium / low). Strong fits first, ordered by score. Auto-falls back across Flash models; answers cached.
5. **Save the scan** — Supabase Postgres
   Store inputs + ranked results; latest scan shown on page load (data exists at submission).

OUTPUT

Ranked outreach list — Next.js UI

For every product:
- Product name
- Founder name
- One-line description
- Upvote count
- Days since launch
- Suggested outreach angle

+ maker comments, score, fit badge, link to ProductHunt

Extras — Browser + Supabase

CSV export · "Hide low-fit" switch · Recent scans history

Human in the loop

Angles are AI suggestions; Kavya reviews before sending.

HOSTING & CODE

GitHub repo → Vercel auto-deploy → public URL

IF SOMETHING FAILS

Topic fails → others still load · Gemini full → next Flash model → else ProductHunt taglines + warning · Save fails → results still shown

WORKED EXAMPLE (REAL DATA)

Velozity: 479 upvotes, 27 maker comments → score 98.7 → ranks above Rill Browser (548 upvotes, 19 maker comments → 96.0)
